

Wednesday 11<sup>th</sup> October: 13:00 – 14:00

## Confidence in Light Steel Frame Building Lifecycle Management

Nick Coubray (Howick Engineering) & Simon Mobley (asBUILT)

### Nick Coubray

Mark's professional background is in Financial Services, and he has 20 years experience in senior Risk, Compliance, HR, Operations, Strategy and Sales roles for a FTSE 100 company.

Working closely alongside clients, he assists them in identifying and articulating their R&D activity to form the basis of their claim. Holding an MBA, he understands the challenges faced by commercial organisations of all sizes, and as holder of an MSc in International Finance he brings deep insight into the financial mechanics of organisations and the challenges faced in R&D activity. His career in Financial Services has seen him work alongside thousands of organisations of all sizes and he ensures that his clients maximise the benefits they achieve from the services we offer.

### Simon Mobley

Howick is a 3rd generation machinery technology company who have been at the forefront of construction technology developing cold formed steel construction systems. These systems have been implemented across the industry from traditional build to cutting edge modular systems. Systems have been installed on over 70 countries.

Having worked with clients globally and across the construction sector I have gained experience in

1. Modular and Offsite Construction Techniques.
2. BIM Modelling and Software interfacing.
3. Product Development
4. Automation of construction manufacturing.
5. Bring people and products together.
6. Developing specialist one off rollformers.

	<p>Having grown up in the industry from building and designing rollformers to guiding the development of complex software and production offerings I am always interested in seeing what can be done to improve how things are done.</p> <p>I also have a keen interest in not only construction technology but innovative tech in general.</p>
