bimobject®
Content Management System - CMS

Content is a mix of geometry and data and a means of creating and storing this to specific client requirements.

Management is the way access to the content is controlled, how the content is being used and by whom.

CMS delivered via the cloud is effectively *Platform as a Service* (PaaS)

bimobject®

WHY CMS?

www.escape-routes-for-prisoners.com

Do we really want to give the right information to the wrong people?

Single Source of Truth - SSoT

In the BIM Environment *SSoT* is the practice of structuring information models and associated data such that every data element is stored exactly once.

In practice this means that there is only one repository for any data element – the *primary source*. Wherever this data is accessed from, the link is always back to this *primary source*.

SSoT is most reliably delivered via cloud based systems - files downloaded from servers can easily be corrupted.
